REMOTE OPERATED HYDRANT OPENER

The **ROHO** was designed to allow preliminary decon at a mass casualty events simply utilizing a departments radios. Our patent pending Remote Operated Hydrant Opener is programed with the departments radio tones to open anywhere from one to 40 hydrants at once to flow water through the cap nozzles to rapidly start the preliminary decon process.

The **ROHO** is easy to install and does not require the water departments assistance. Once attached a single locking point ensures the unit cannot be tampered with and the top-mounted hydrant nut is still accessible for firefighters if the need to manually operate arises.

The long shelf life battery packs will insure the unit can operate for 3 days so the units can be placed in the field prior to the event. The units can then be daisy-chained together to be trickle charged once the units are back in storage.

Easy to install

3 days of battery shelf-life

Riot-proof
